# Automation for Fintech

Built by security practitioners, Tines enables organizations to take a holistic approach to cybersecurity while balancing security and convenience for their customers.

Trusted by the world's leading security teams

SOLUTION

## Automation for Fintech

Cybersecurity threats against financial institutions have grown exponentially in recent years. Major financial organizations experience as much as 300% more cyberattacks than other businesses.

As the world continues its digital transformation and consumers break down the boundaries between physical and digital commerce, the need for financial service providers to be proactive and leverage scalable products that detect and respond to weaknesses in systems and transactions has never been greater.

Whether running a credit card, transferring cryptocurrencies, or withdrawing cash from an ATM, it's critical that customers can trust their personal and financial information is being rigorously protected.

To combat increasing levels of phishing and fraud and avoid reputational damage, organizations must take a holistic approach to cybersecurity while balancing security and convenience for their customers.

### Why Tines

Security analysts spend more than 25% of their time doing the same routine tasks. Tines enables security and operations teams to prioritize their mission-critical work by allowing them to automate any repetitive manual process independently.

A vulnerability in one area can potentially have a significant impact somewhere else. Built by security practitioners, Tines helps streamline your internal processes and rapidly connects to your other tools, custom and off-the-shelf, to improve visibility and response times.

With Tines, teams can become more effective and efficient, minimize room for error, and retain complete control of their infrastructure, enabling them to apply their best judgment and evolve when needed.

### Tines for Financial Institutions

- ✓ Automate any key process; phishing + fraud response, end detection, SIEM alerts, enrichment, triage, etc.
- ✓ Cloud-based, on-premise, and multi-tenant infrastructures
- ✓ Unrivaled flexibility; integrate every tool in your stack for improved visibility and control
- ✓ Self-service; independently create & maintain digital workflows, faster
- ✓ Dedicated customer support; rubber ducking, best practices, troubleshooting, feature request
