

Complete Software Supply Chain Management:

One multi purpose platform to deliver secure apps to market faster.

DEV

- ▶ Provide accurate and actionable feedback to fix bugs during code review
- ▶ Quickly identify the best components to reduce re-work and technical debt.
- ▶ Remediate open source policy violations with precise intelligence in existing tools (IDEs and SCM)
- ▶ Automate dependency management for direct and transitive dependencies.

SEC

- ▶ Flexible policy engine for enterprise scale.
- ▶ Open Source Firewall to block bad components.
- ▶ Risk score to identify malicious behavior.
- ▶ In-depth security research – 65 researchers, 96M components, 14M vulns, hundreds of data sources, AI/ML

OPS

- ▶ Deliver stable builds with a binary repository.
- ▶ Generate a SBOM for production/legacy apps.
- ▶ Continuously monitor for new risk.

LEGAL

- ▶ Clear view into license obligations and attributions.
- ▶ Legal workflow to automate license reviews.
