RSA[®]Conference2022

Privacy standards in the context of information security

How to apply what you learned today?

- Next week you should:
 - Understand who is working with security and privacy frameworks and standards within your organization/your scope of work
- In the first three months following this presentation you should:
 - Identify which security and privacy frameworks and standards are used or implemented within your organization/your scope of work
 - Identify which security and privacy frameworks and standards could additionally be useful to use or implemented within your organization/your scope of work
- Within six months you should:
 - Collaboratively compile a strategic proposal
 - Drive an implementation project to update the utilization of relevant frameworks and standards
