

RSA®Conference2015

Singapore | 22-24 July | Marina Bay Sands

SESSION ID: GRM-R01

Compliance Goal: Implementing Segregation Of Duties In An Organization

Lenka Fibikova

Independent Consultant

CHANGE

Challenge today's security thinking

Why Segregation of Duties

- ◆ Compliance with the national laws requiring correctness of the financial information and financial reporting
- ◆ Business requirements on integrity of business information

The story starts with...

- ◆ Identified misuse
- ◆ Findings from an external auditor
- ◆ Findings from an internal auditor
- ◆ Push from an enlightened leader

Challenges

- ◆ **Challenge 1:** To make Business Process Owners responsible for segregating business functions (e.g., transactions, invoicing)
- ◆ **Challenge 2:** To convince IT management that uncontrolled access of IT users to the business data is a bad idea
- ◆ **Challenge 3:** To take the toy out of the Business Process Owners' hands (shadow IT)
- ◆ **Challenge 4:** To make it clear that IT functions (e.g., access control) are no exception from segregation of duties

Areas of concern

defined by the BP owner
(B-B)

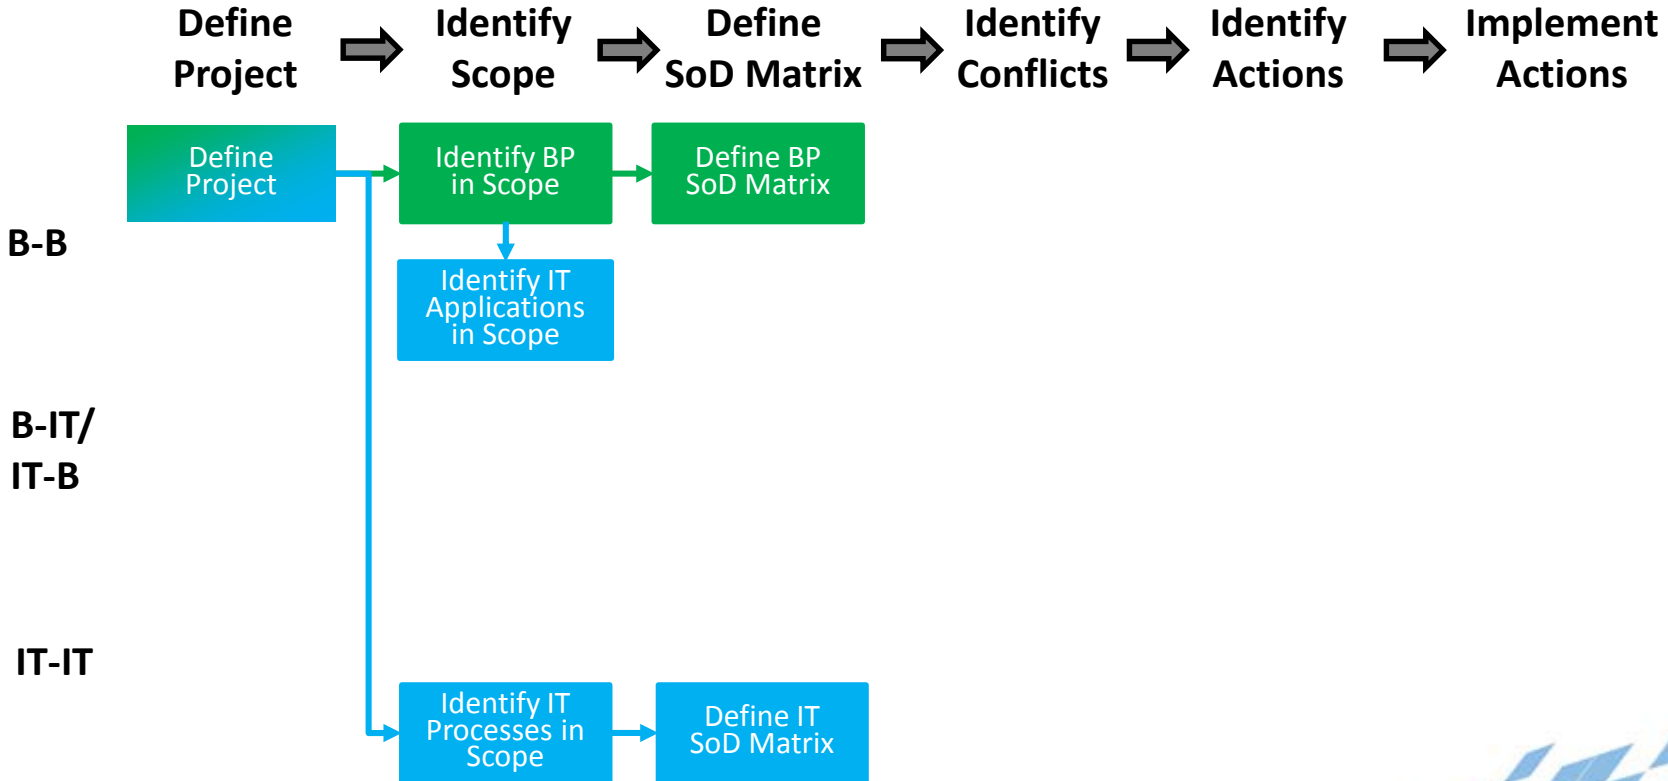

defined by the IT
(IT-IT)

cross-functional

not acceptable
(B-IT, IT-B)

Implementing SoD Step by Step

Exercise: Define a B-B SoD Matrix

1. Document the process, its sub-processes and tasks
2. Identify SoD-relevant tasks ◀
3. Create the SoD matrix

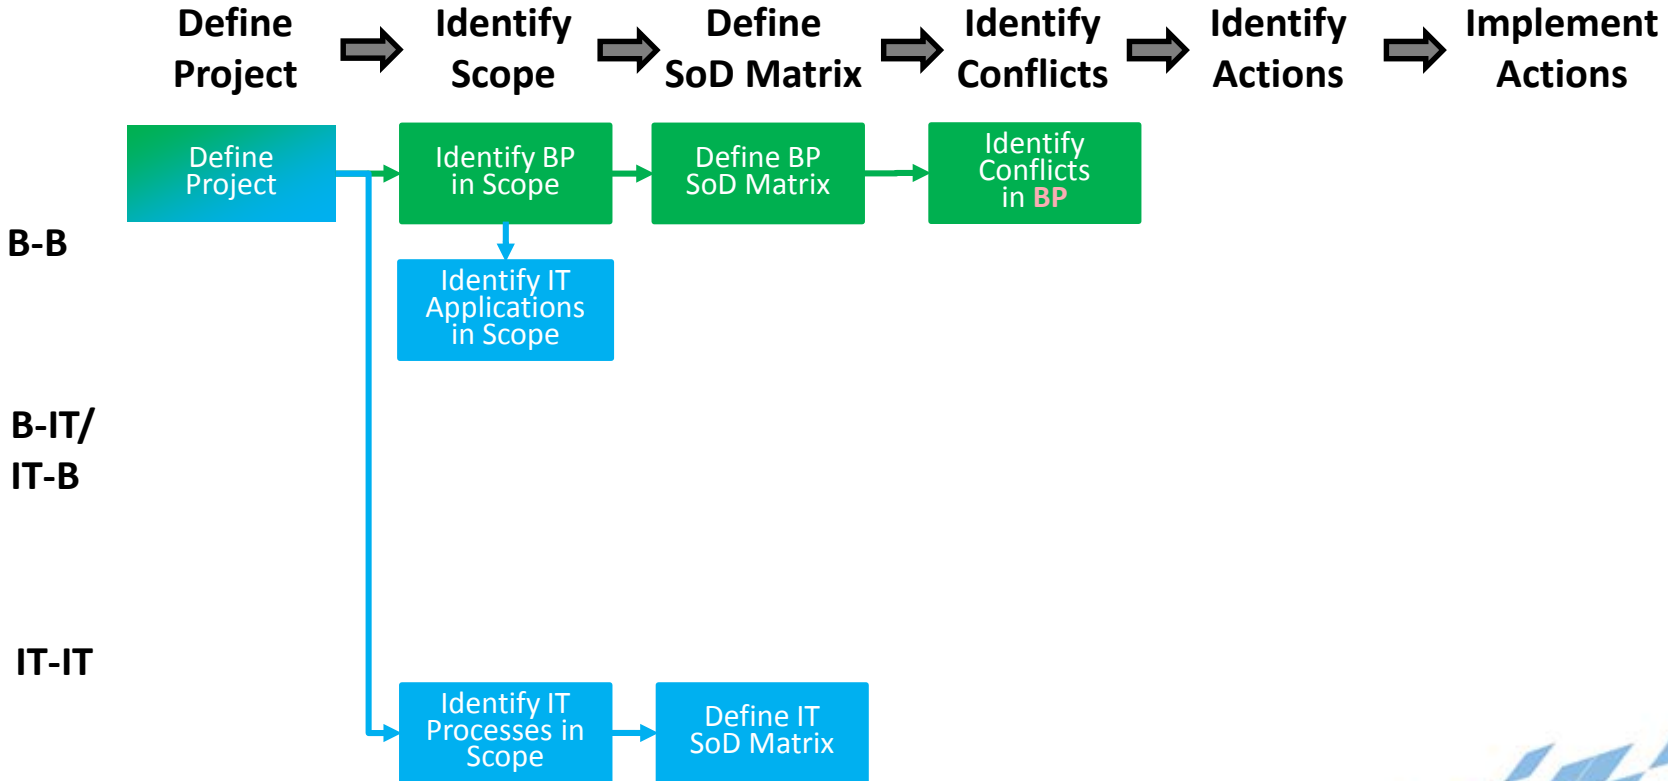

Test conflicts to		Enter the code ranges																							
		Processing Master Data				Sales Orders Contracts				Invoices				Credit/Debit Note				Cash Receipts Payment

- ◆ Change Management
- ◆ Access Management
- ◆ Operation

[illegible]

Implementing SoD Step by Step

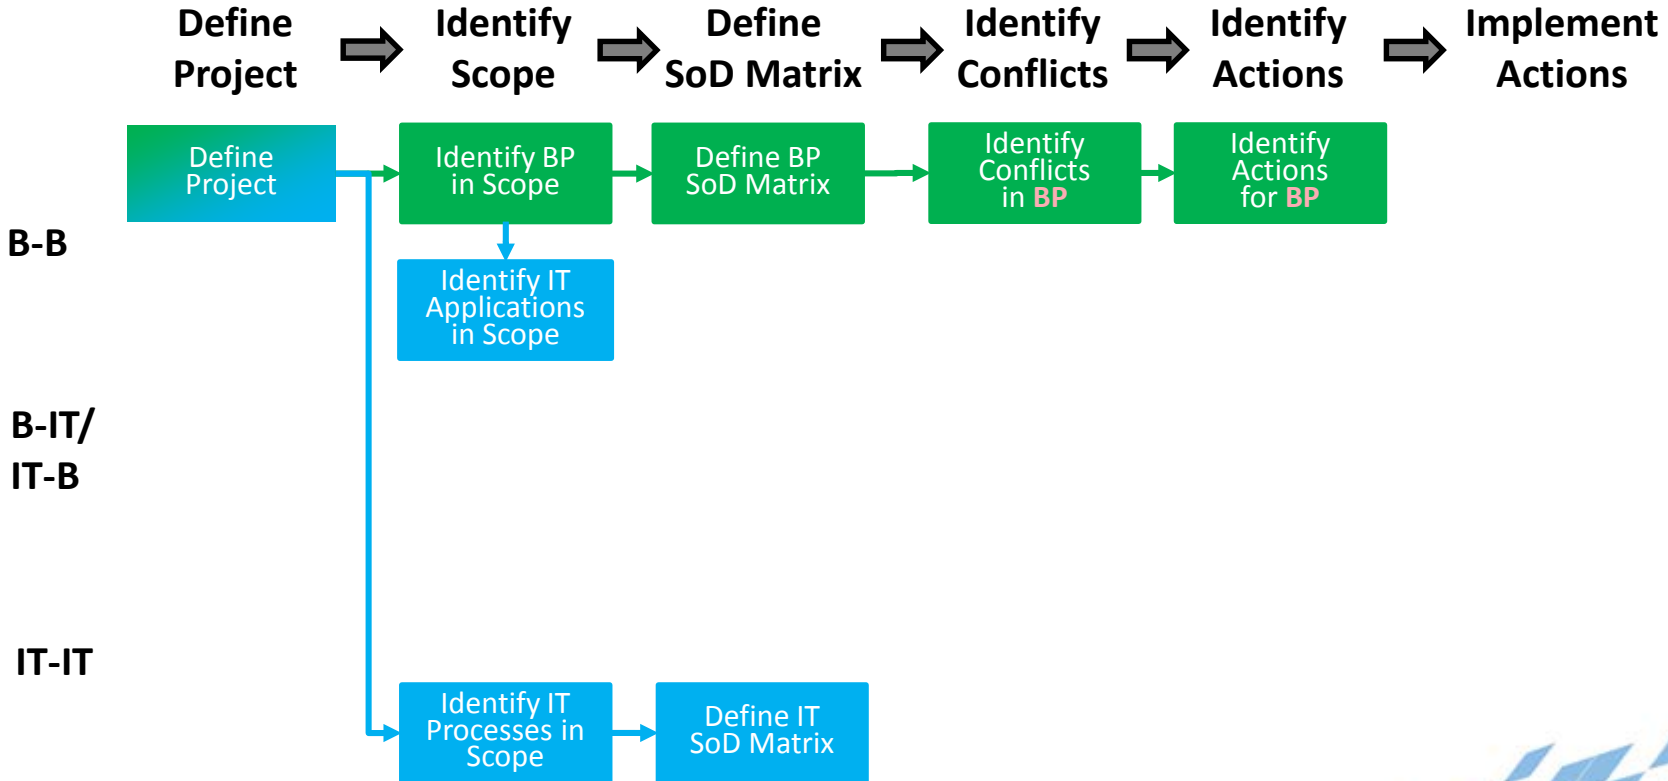

Exercise: Identify conflicts

1. Identify business roles
2. Document which SoD-relevant tasks each of the roles executes
3. Verify whether any of the roles currently violates defined SoD rules

test conflicts for:		x																							enter the role names																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																									
Process	Task	Task description	Processing Manual Data		Sales Order/ Contracts		Invoicing		Credit/Debit Note		Cash Receipt/ Payment													System	Role 1	Role 2	Role 3	Role 4	Role 5																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																					
			1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21							22	23																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																			
Processing Manual Data	3. Initiate New Case Change	Manual																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																</

Implementing SoD Step by Step

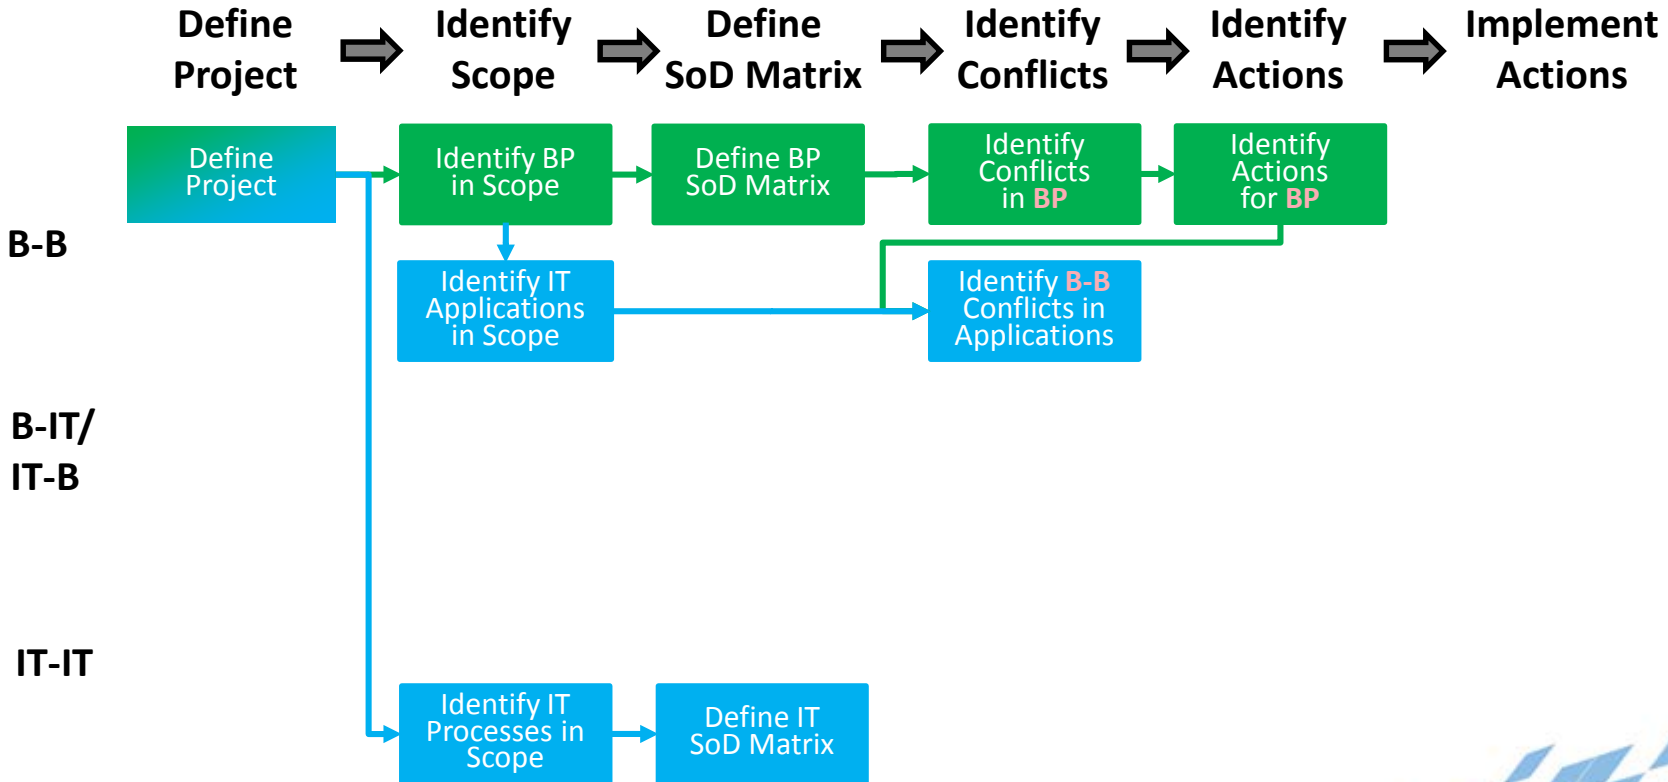

Exercise: Identify Actions

For each of the identified conflicts, an action **has** to be defined and documented:

- ◆ Immediate **removal of the conflict**
- ◆ Immediate **setup of administrative measures** to minimize the risk
- ◆ **Implementation plan** for removal of the conflict or for setup of administrative measures to minimize the risk
- ◆ **Formal risk acceptance** by the Business Process Owner (might not be possible for some risks)

Implementing SoD Step by Step

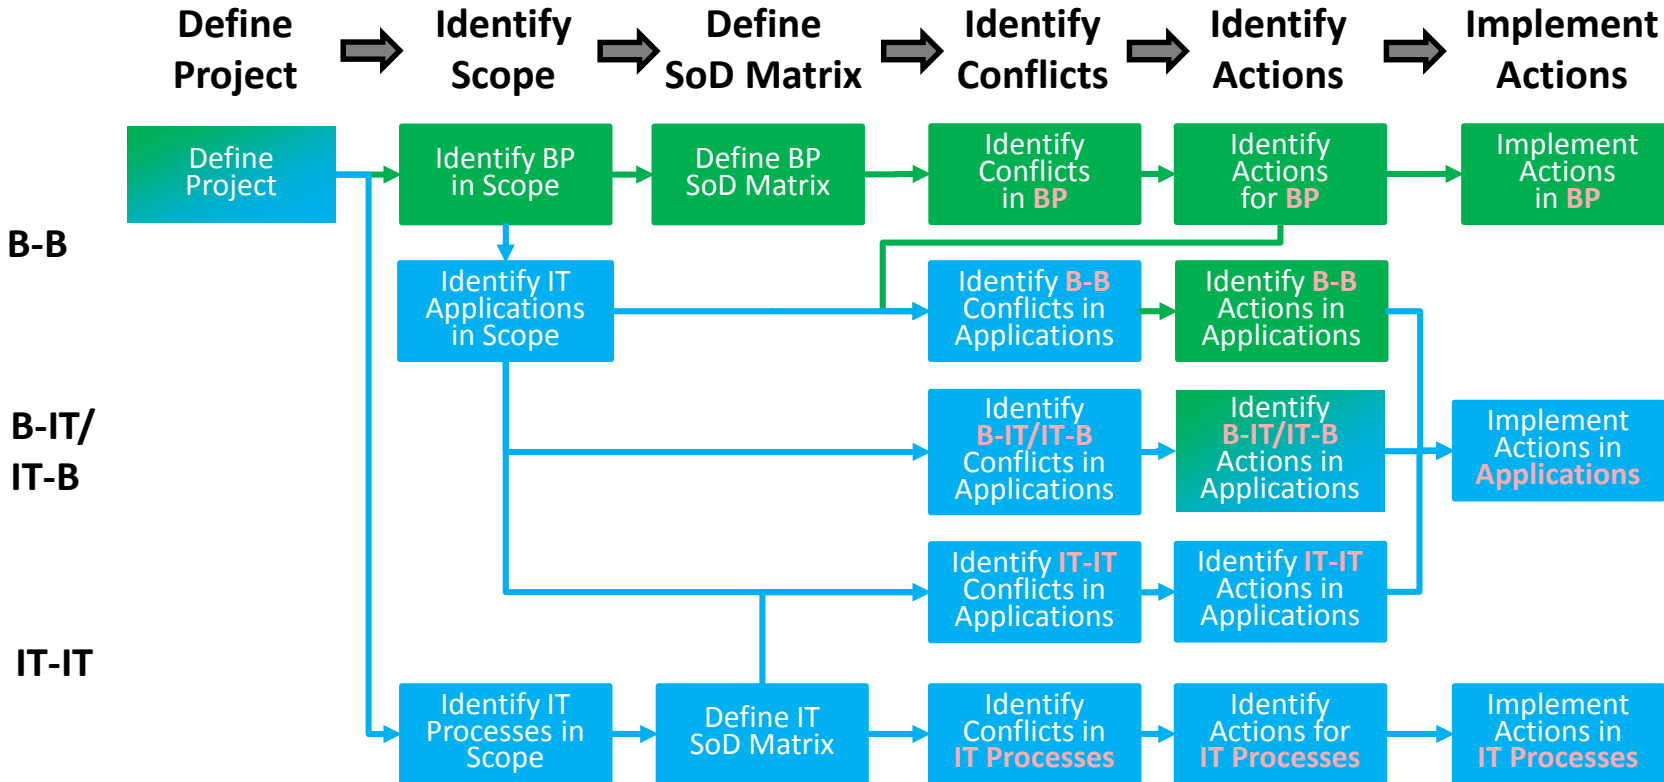

Exercise: Mapping the SoD Matrix to IT

1. Identify which applications and application functions support the tasks
2. Extract which user IDs use the identified functions
3. Identify SoD conflicts

Processes	Tasks		Executed in (application name/ manual)	Business Roles	Role 1	Role 2	Role 3	Role 4	Role 5	Role 6	Role 7	Functions supporting the task	Users	UID 1	UID 2	UID 3	UID 4
Process 1	3	Task 1.3	application/manual		x												
	4	Task 1.4	application/manual					x	x								
	5	Task 1.5	application/manual		x				x								
	8	Task 1.8	application/manual				x										
	9	Task 1.9	application/manual						x								
	12	Task 1.12	application/manual				x										
	13	Task 1.13	application/manual					x									
Process 2	15	Task 2.1	application/manual			x											
	16	Task 2.2	application/manual					x	x								
	20	Task 2.6	application/manual		x			x									
	21	Task 2.7	application/manual							x							
	31	Task 3.1	application/manual								x						
Process 3	30	Task 3.0	application/manual					x									
	32	Task 3.2	application/manual					x	x								

Implementing SoD Step by Step

Lessons Learned: Good Approach

1. Small, transparent, understandable steps
2. Documentation of processes where not yet done
3. Improvement of business processes
4. Segregation of duties for both manual and IT-supported tasks
5. Segregation of duties across applications
6. Compliance

Lessons Learned: The Hard Part

1. Be ready to deal with legacy applications
2. Compliance of shadow IT is expensive
3. When business units do not want to give up the access management functions
4. Sustainability or Consider a tool to keep the status clean

Apply in Your Organization

- ◆ **Next week** you should:
 - ◆ Verify how you handle integrity of your financial data and whether Segregation of Duties has been consistently applied
 - ◆ Consider whether there are any further (business-related) reasons for SoD
- ◆ **In the first three months** you should:
 - ◆ If there is no consistent approach for SoD, initiate a discussion with the senior management
- ◆ **Within six months** you should:
 - ◆ Set up an SoD project
 - ◆ Remember: Implementation of SoD takes longer than it might appear
