

MIGRATE

Advanced and scalable file migration

Orchestrate both simple and advanced file transfers across virtually any cloud service, network file system or legacy ECM platform

Increasing data in a digital wasteland

For any organization, unstructured data can live in several different storage platforms and systems. As files continue to accumulate, companies try to consolidate them; however, legacy platforms are increasingly slow and unable to maintain the integrity of content during these attempts, causing costly disruption in operations and security.

Maintain business as usual

The Dryv platform's unique **continuous copy mode** executes file transfers in the background – completely transparent and enabling users to move to the new platform at the organization's own pace – with absolutely zero impact to existing operations or system integrations.

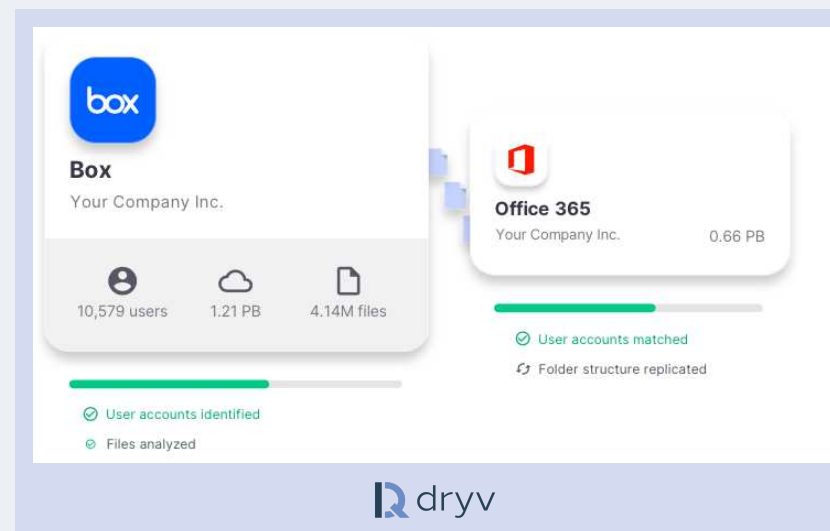

The platform ensures that target system files are up to date in near real-time and precisely mirror the source system.

Sync all storage systems

Synchronize on-premise storage systems with cloud-based storage services to unlock seamless collaboration while preserving on-premises system performance and system-of-record. Seamless to users, new files and file changes from either system are automatically reflected in the other to maximize productivity.

Precisely predict migration outcomes

The Dryv platform is purpose-built to simultaneously interrogate thousands of file storage end-points and repositories, no matter if they are in the cloud or on-premises, within remote office networks, ECM systems or even user PCs.

..... **Don't compromise on migration**

High-fidelity delivered. DryvIQ **preserves all aspects of file fidelity**: metadata, permissions, links, sharing profiles, unique source system attributes and more. The platform enables validation reporting, which provides a detailed reconciliation report of your content after the enterprise file migration is complete.

..... **Advanced functionality and automation**

User account mapping

Home drive mapping

Permissions mapping

Metadata mapping

150TB

Interrogate up to 150TB per day

Dramatically reduce file discovery time—interrogation that once took weeks or months now takes mere hours.

60TB+

Speeds of 60TB+ per day

Rapidly migrate files without interrupting the workflow of your organization.

99.99%

Transfer success rates exceed 99.99%

Streamline your file migration, SkySync delivers transfer results exceeding industry averages.
