{  
  "description": "With '\Trust none over the Internet\' mindset, securing all commun  
with protocols such as TLS has become a common practice. However, while the communication  
there is still an area where such security awareness is not seen: inside individual comput  
expected. \This talk discusses the security of various inter-process communication (IPC)  
applications use to interact with each other. In particular, we show IPC-related vulnerab  
process to steal passwords stored in popular password managers and even second factors fir  
ing the primary way of authentication, the insecurity of this '\last mile\' causes the se  
on strands to be obsolete. The vulnerabilities that we demonstrate can be exploited on mul  
esses of multiple users running at the same time. The attacker is a non-privileged user to  
from other users. Such computers can be found in enterprises with centralized access contr  
to the same host. Computers with guest accounts and shared computers at home are similarly

Gunny_DJ

This app is the bees knees, cats meow, the prize in my ladmow bag, elephant's adenoids, cat's miaow, ant's pants, tiger's spots, bullfrog's beard, elephant's instep, caterpillar's elbows,

Simply the best!

's garter, eel's
Kevcody s, pig's wings,

Tired of your event/conference app crashing, requiring crazy amounts of bandwidth, or simply not fitting the needs of your security conference? Look no further! HackerTracker is the best of the the best of the to the dev team

Jeff Rosowski

★★★★★ September 6, 2017

great clean and simple..it gives you the information you need. it's great to see it's expanded

KC Budd

★★★★★ July 30, 2017

So much better than trying to get a schedule over broken cellular data and fake OpenLTE towers. :)

A Google user
