

Modernize Your Network For Faster, Better Business Outcomes

Enterprises understand that their network is no longer a collection of technology assets, but a core component to business success.

Transforming network operations is not easy.

To deliver maximum value and easily support future initiatives organizations must: ensure the network meets business objectives, have full network and application visibility for better decisions, and reduce the cost to operate the network.

UNMATCHED NETWORK VISIBILITY

LiveAction provides end-to-end visibility of network and application performance from a single pane of glass.

LiveAction allows companies to manage large and complex networks by unifying and simplifying the collection, correlation, and presentation of application and network data making it actionable for network management teams. With our unified platform, enterprises are able to eliminate the cost and complexity of managing point solutions, reduce meantime to resolution, and save days documenting activity by leveraging automated reporting. Customers become more proactive by leveraging network analytic and AI/ML techniques to identify and fix issues before an application or network problem impacts the business.

ACCELERATE PERFORMANCE

Common performance issues have a far-reaching impact on the entire business.

Challenges to digital business initiatives include sprawling network and application management tools that operate in silos, poor application performance, ineffective troubleshooting, incomplete reporting and analysis, poor planning and deployment practices, and limited network preparedness. This all adds up to limited network and business agility.

LiveAction addresses these challenges by enabling organizations to reduce both internal and customer downtime, making sure SLAs are met even as business requirements evolve. Enterprises can proactively plan for any changes in the network, whether a new SD-WAN deployment, critical business application, or migration to the public cloud. What's more, NetOps teams are now effectively equipped to address the modern challenges of the ever-changing network. Here are a few of the network challenges LiveAction helps enterprises solve.

TRANSFORM YOUR BUSINESS

LiveAction solutions deliver the network performance your organization demands.

LiveAction is the only solution to provide end-to-end network visibility in a single pane of glass.

Network Performance Management

- Achieve network-wide visibility
- Optimize performance
- Unify network data

- LiveNX
- LiveNA
- LiveWire

Network Analytics/AIOps

- Application performance optimization
- Anomaly identification
- Proactive management of application SLAs

- LiveNX
- LiveNA

Network + Application Troubleshooting

- Achieve detailed visibility
- Accelerate troubleshooting
- Optimize security and compliance

- LiveCapture
- LiveWire
- Omnipeek

About LiveAction

LiveAction supports the entire network including campus, branch, datacenter, public cloud, WAN, and SD-WAN. We leverage the broadest array of telemetry including NetFlow, Packet, SNMP, API, and IPIFIX. While remaining vendor agnostic, LiveAction supports all key network vendors.

LiveAction has the enterprise scalability that can consume the millions of performance data points sent every second by your network. Our unmatched data fidelity and the finest level of granularity gives you end-to-end visibility at the global level but lets you drill down to a location, a single hop, or packet. LiveAction gives you all of this with both real-time access to this data as well as historic playback, without compromise. LiveAction provides enterprises the confidence that their network is meeting business objectives, full network visibility for better decisions, and reduced cost to operate the network.
