

No-code automation for security teams

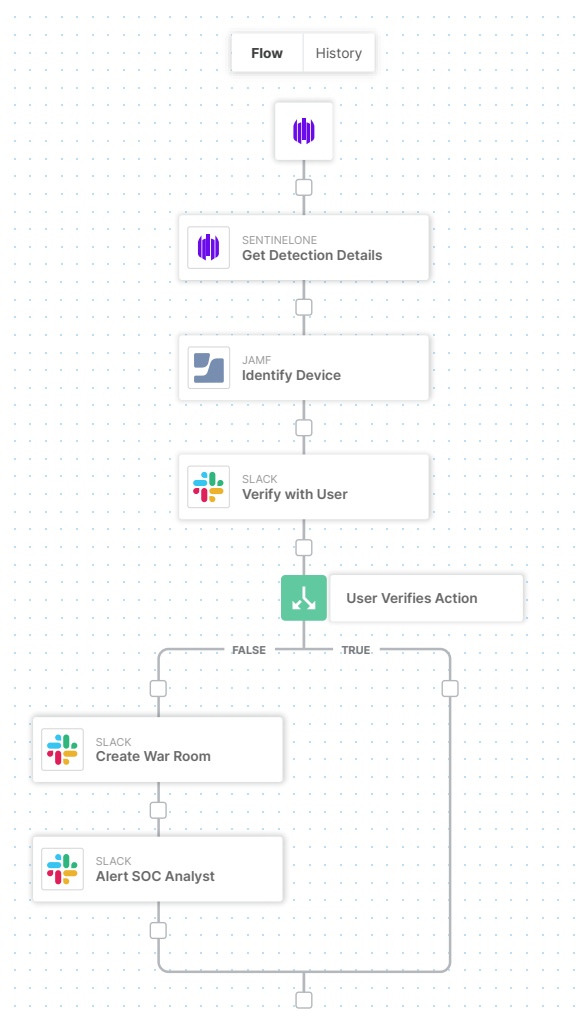

Easy Automation for Better Security

1. Reduce alert fatigue. Focus on what matters by automatically handling duplicate alerts and false positives.
2. Remediate and respond faster. Automate remediation and threat response flows to improve security posture.
3. Integrate security into any process. Schedule workflow runs, trigger automatically, or run manually via Slack, CLI and more.

No integrations. No plugins. No waiting.

- Torq connects to anything, anywhere. On premise, public cloud, private cloud, you name it. Hundreds of out of the box templates cover most common security tools and platforms.
- Something not already covered? Torq's simple integration tools let you easily connect to it - no matter what it is or where it runs. No integrations, no plugins, no need for professional services.

Security teams from Fortune 100 enterprises to cutting edge startups trust Torq to help them eliminate manual work, improve decision making, and deliver better protection to their colleagues and customers.

Automation for any security scenario with Torq

No matter the need, Torq helps security teams move faster and deliver better outcomes. Below are just a few of the processes Torq automates and improves for our customers.

-  Email Phishing and Abuse Response
-  User on-boarding/off-boarding
