

Empower teams to improve with deep workflow insights

Accelerate velocity and release products faster with visibility into your engineering workflow. Pluralsight Flow aggregates historical git and ticket data into easy-to-understand insights and reports to help make your engineering teams more successful—while meeting GDPR requirements, respecting individuals and adhering to the Works Council.

View team-level analytics

With Flow, leaders can discover roadblocks faster and help their teams achieve their full potential. They can also give team members access to personal metrics that can help them improve productivity and positively impact project delivery—so teams can build a culture of engineering excellence that's centered around trust.

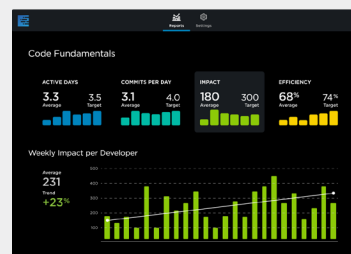

Identify long-term trends in your team's productivity at scale

Become stronger together with a clearer picture of what's working for your team and where there are opportunities for process improvements.

Get personalised support

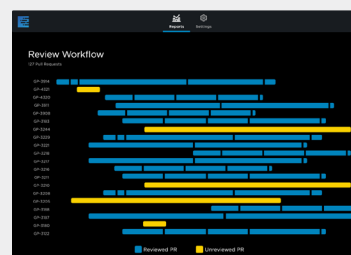

Our Customer Success team works closely with leaders on their unique requirements and is well-versed in Works Council requirements. We can also provide admin access to your Works Council during your trial period.

Start empowering your team with Pluralsight Flow today.

Empower leaders to create better processes
Eliminate disruptions, spot bottlenecks and protect releases from delays

Improve team collaboration
Identify healthy collaboration patterns to eliminate silos and boost knowledge distribution

Decrease code review time
Manage pull requests at scale to reduce cycle time and accelerate time to market

Make lasting workflow improvements
Go beyond Jira data and get visibility into what's happening within your user stories, tasks and bugs
