# Votiro Cloud + Office 365

Deliver safe, usable, malware-free content at scale in real-time

## Votiro Cloud + O365

### Highly Scalable

Protect against 1,000 emails an hour or more than 100,000+

### File Breadth

Votiro is the industry leader in CDR, protecting against the most file types of any vendor, including **password-protected** and **zipped files**

### Reduces Resources

Reduce the need to unblock or remove files from quarantine; SaaS means no upgrading or maintenance

Email is a critical and essential communication and productivity tool for organizations, agencies, and institutions. Employees need to receive emails with content and attachments in a timely manner to avoid operational delays and productivity interruptions. Email crosses trust boundaries within and outside the organization, involving multiple business units like human resources, marketing, public relations, operations, and engineering.

Any employee with an email address – and especially those that interact often with the world outside your company – are vulnerable to zero-day targeted attacks with sophisticated phishing attempts and **hijacked email conversations**.

## Threat Detection Issues in Existing Email Security

Existing solutions like secure email gateways, antivirus, and sandboxing provide a layer of protection against known malware already logged in threat databases. But unknown, new, and zero-day threats – or techniques that mask known threats like password-protecting or zipping files – evade these traditional approaches to email security. Organizations often default to blocking files to protect against unknown threats, which may or may not be present, decreasing productivity and delaying the delivery of mission-critical files and communications.

## Votiro Cloud: Safe Emails Delivered Instantly

Votiro Cloud proactively removes malware threats from Office 365 email content and attachments, without significantly delaying email delivery. Votiro's patented Content Disarm and Reconstruction-as-a-Service technology identifies the known-good elements of files, selecting them and moving them to a clean file template in a single, seamless process. This achieves 3 main objectives:

### 1. Malware removal

It removes all malware from the delivered content, including new, unknown, or hidden malware, without needing to detect the malware first.

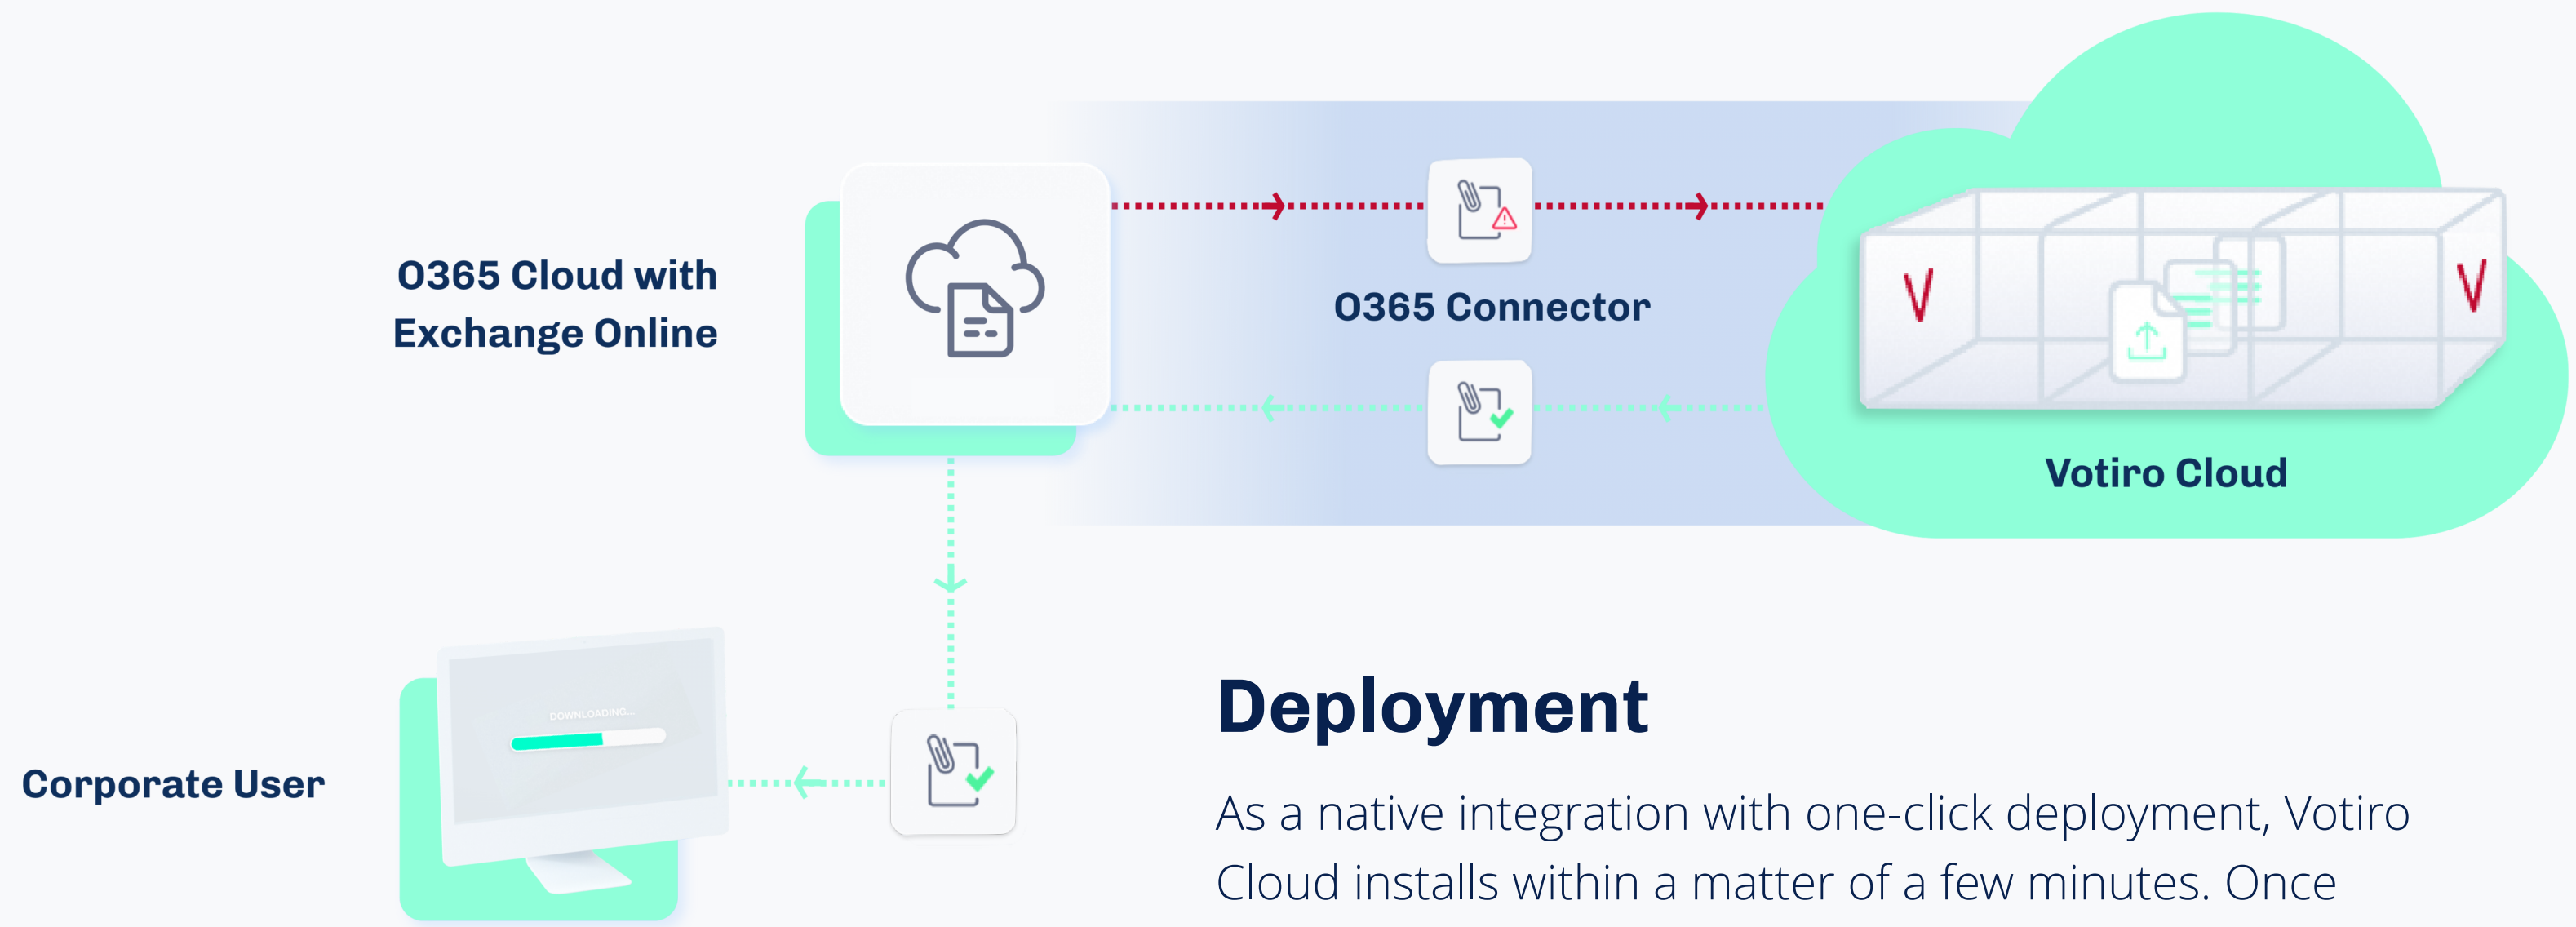

### 2. Zero Trust Content

It applies a Zero Trust approach to all content incoming, as every single piece of content is processed an identical way.

### 3. Usability of Content

Employees can receive the content right away, without delays or support requests to IT, and can begin using the content right away, as the functionality and integrity of content remains intact.

## 0365 Connector

### Deployment

As a native integration with one-click deployment, Votiro Cloud installs within a matter of a few minutes. Once installed, Votiro Cloud works instantly to protect your users from incoming malicious content.

## Try Votiro Cloud

To learn more about implementing Votiro's technology to secure your O365 environment from threats delivered via files, please **schedule a demo** or contact a **Votiro partner today**.
