

SOLUTION

Automation for IT Teams

Automation is critical to IT optimization and digital transformation. Tines helps IT teams to connect their tools and streamline their processes, regardless of use case or complexity.

Trusted by the world's leading security teams

IT TEAMS

Automation for IT Teams

Automation is critical to IT optimization and digital transformation. With Tines, high-demand IT teams can build automation Stories for time-consuming manual processes, including onboarding employees, cloud provisioning, IT migration, application deployment, etc.

Why IT teams choose Tines

Tines' no-code automation platform is drag-and-drop with Templates, Forms, and Teams, enabling IT teams to easily build and manage their own automations without the need for developers.

As a vendor-neutral platform, Tines offers immediate integrations with modern, dynamic environments and best-of-breed tools, enabling IT teams to:

- Streamline processes and eliminate common errors
- Automate manual steps in repetitive workflows and data migration from old to new systems
- Improve collaboration, agility, and security across departments
- Increase productivity and improve response times

Sample Use Cases

Tines experts work alongside your IT team to instill best practices and identify the tasks, tools, and processes that should be automated. Sample IT use cases, with impactful results, include:

End User Communications: Transform ChatOps; allow users take actions from within their chat application. Send users a Slack message after unsuccessful log-in attempts. Request approval for new hardware/software in Microsoft Teams. Send emails to users and open support tickets if they don't respond to DMs within a specific time frame.

Endpoint Management: Automate time-consuming employee activity confirmation and in the event of real threat quickly perform remediation actions, such as password resets and machine isolation. It's flexible, secure and dramatically reduces response times.

Onboarding and Offboarding: Improve employee, contractors, and vendor experiences. Enroll in benefits/payroll in advance. Send welcome notes and facilitate access to relevant tools on day one. Facilitate compliance efforts; run regular audits of your environment to manage and revoke system access.

Other platforms have a lot of unnecessary complexity, but Tines is flexible, lightweight, and easy to use.
