

## Understanding the Monetary Impact of Risks

## Risk Cloud Quantify for Any Application

## Clarify Risks for Leadership

Executive teams and board rooms are more immersed in governance, risk, and compliance than ever before. Making risk-informed business decisions can give organizations the strategic advantage. Risk Cloud Quantify equips risk professionals with the confidence to communicate risk strategies by translating risks in terms of money. Conversations around risk can move faster, strategies are made more precise and confidence in business outcomes is increased.

Risk Cloud Quantify™ is built on the Open FAIR™ (Factor Analysis of Information Risk) Model to rank risks within the Risk Cloud® platform. This international standard for risk management modeling allows for transparency into how you arrive at your numbers while factoring in confidence levels around the data you input. Over time, the data extracted in Risk Cloud Quantify will become more precise and robust.

# Risk As Your Strategic Advantage

## Proactive Risk Management

- Rank financial risk exposure scenarios and prioritize what risks to take on and mitigate first
- Understand time and money impacts on your organization's security profile

## Enhanced Decision-making

- Complement qualitative color charts, risk matrices, and risk scores with quantitative data of your risk exposure
- Incorporate quantitative data into your risk strategy and take calculated risks with confidence

## Own Your ROI

- Enable revenue generation and retention
- Build ROI analyses based on your risk management practices

## Credibility

- Generate results with built-in internationally recognized industry-standard model for risk quantification — Open FAIR™ Model
- Build credibility and buy-in by effectively communicating results in the language that everyone understands - money

## Flexibility

- Apply Risk Cloud Quantify™ in IT Security, Cyber Risk Management, Enterprise Risk Management, and other use cases
- Easily get started with any data available in your register
