RSA°Conference2015 Singapore | 22-24 July | Marina Bay Sands

SESSION ID: SPO-F01

Securing Dispersed Networks

Sanjay Ramnath

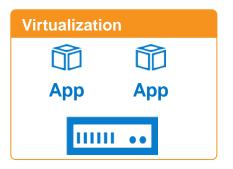

Senior Director, Security
Barracuda Networks
@barracuda

Dispersion is Rampant

Branch Office ATM

Remote Users

Cloud Apps

Drivers of Dispersion

- Application Dispersion The Cloud
- Network Dispersion Distributed Networks
- User Dispersion Mobility
- Application Delivery Dispersion Virtualization

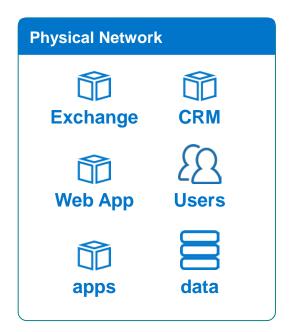

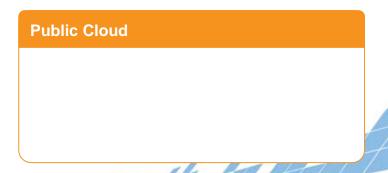

- Move to SaaS drives Network & Application Security
 - Business apps that were on the "LAN" are moving to the cloud
 - Need business quality Internet access to business applications

- Move to Public Cloud drives Network & Application Security
 - Application delivery model changes

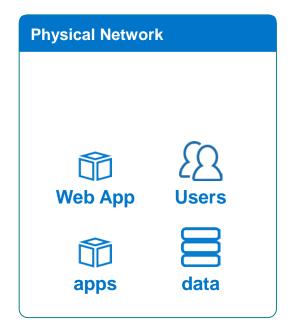

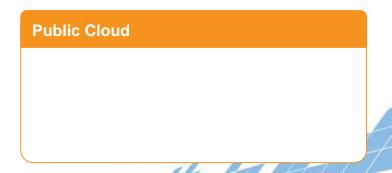

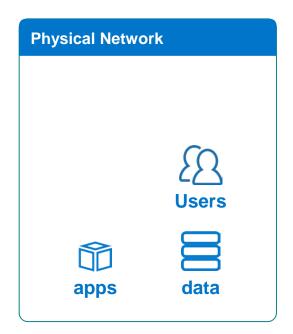

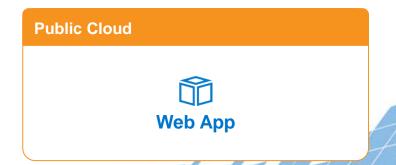

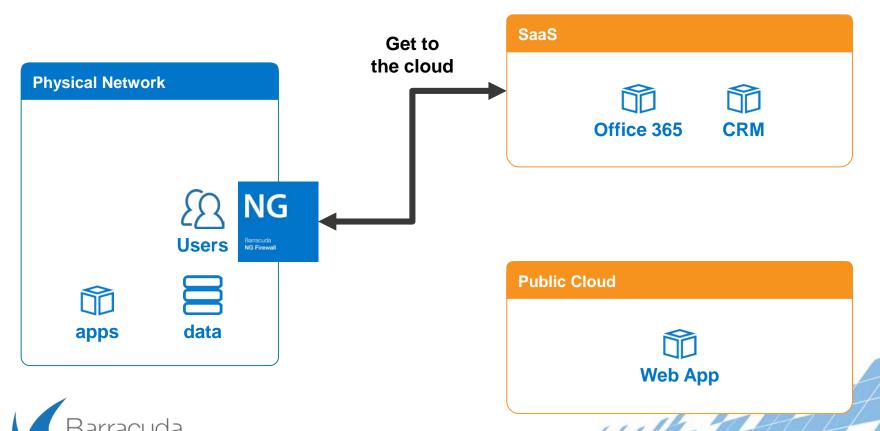

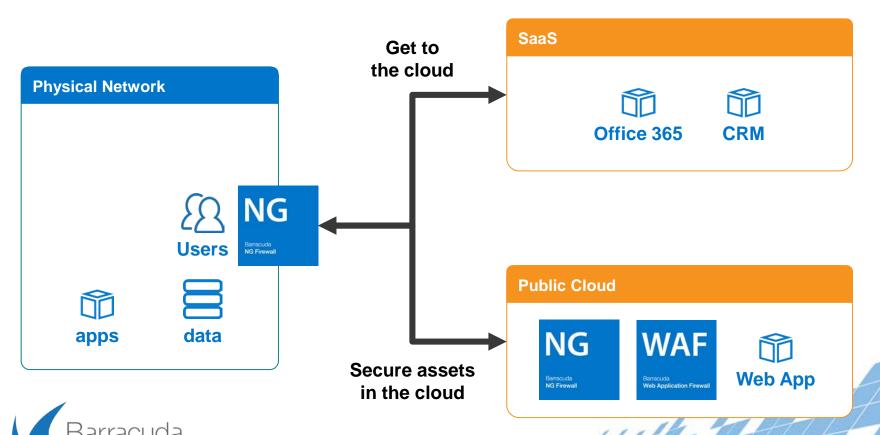

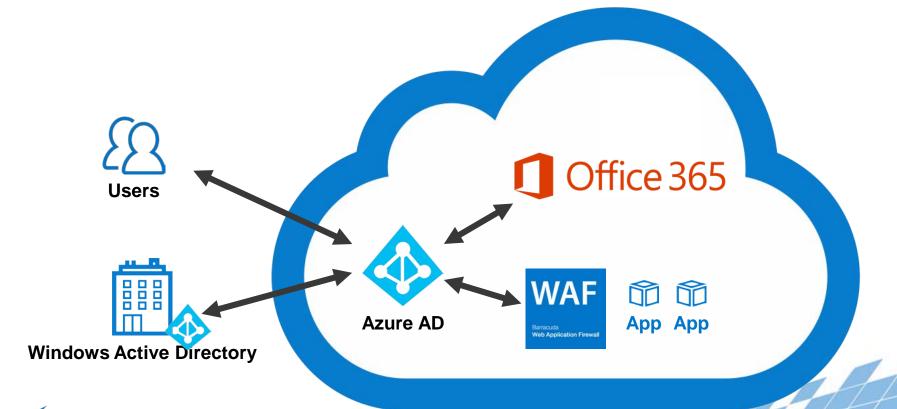

Azure AD – Single Sign-On to Internal Apps

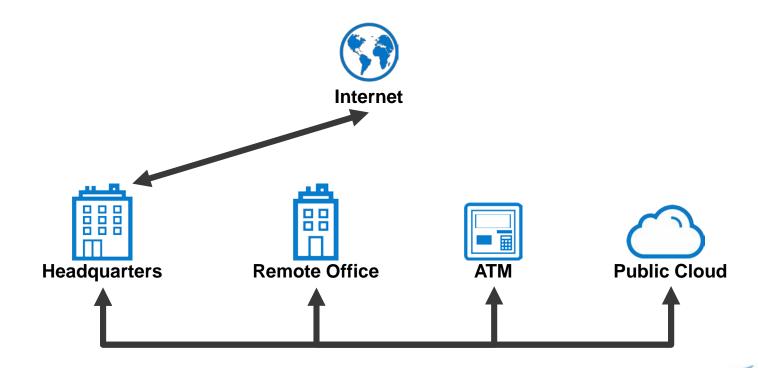

Network Dispersion – Distributed Networks

- Traffic is not backhauled anymore
 - Cloud apps are accessed from local breakouts
 - Need business quality Internet access at all locations
 - Central Management is key

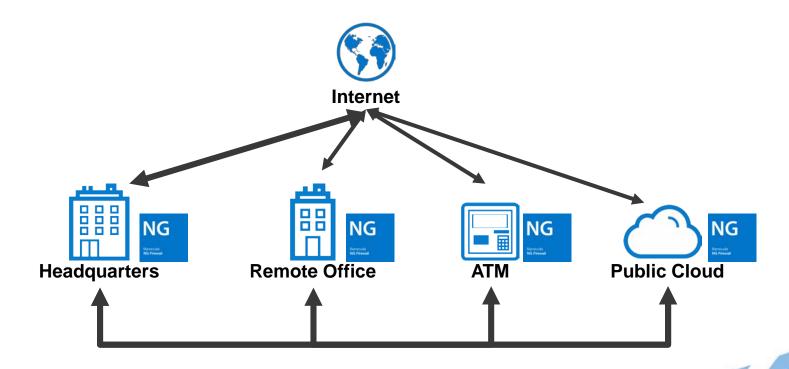

The Old World – Backhauling

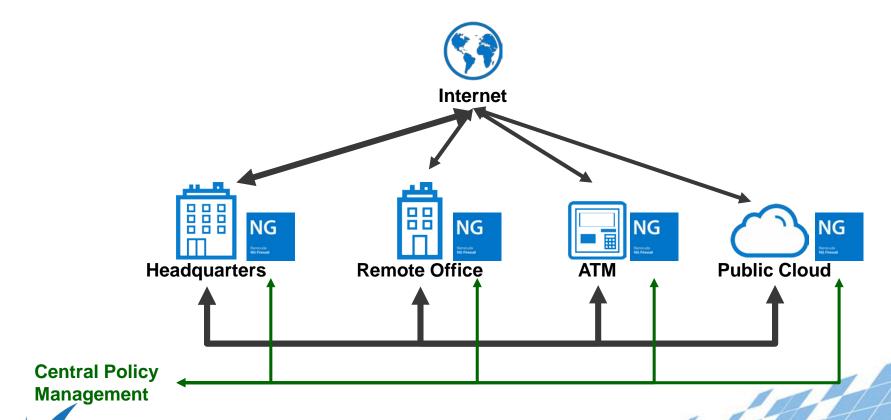

The Old World – Backhauling

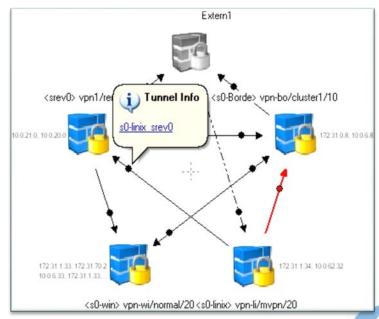

The Old World – Backhauling

Network Dispersion – Central Management

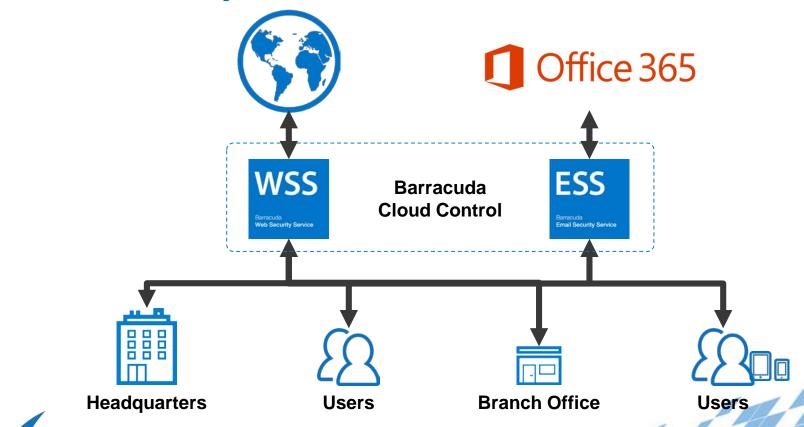

Network Dispersion – SaaS

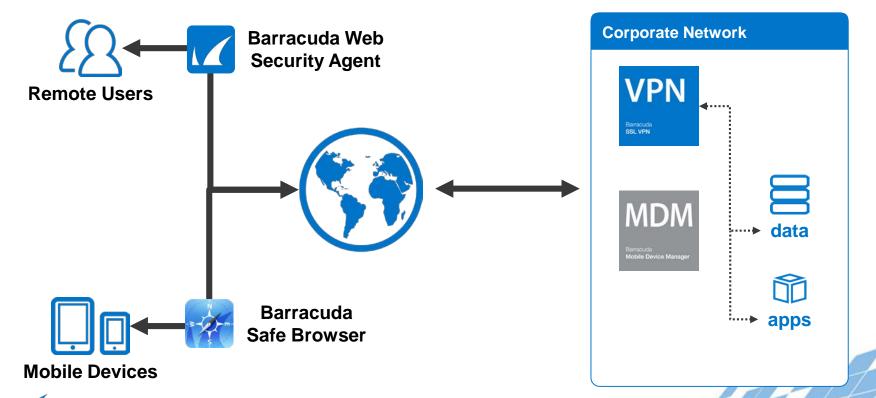

User Dispersion – Mobility User Dispersion

- Impact
 - BYOD devices restrict "heavy" endpoint deployment
 - Lightweight endpoints with intelligent cloud + premises backend
- New requirements
 - Remote filtering
 - Integrated policy/reporting for web filtering inside and outside the firewall
 - Mobile VPN access control and portals
 - Cloud access to internal resources even when hosted in private clouds
 - Mobile device management
 - Device security posture, configuration of security services, and application management

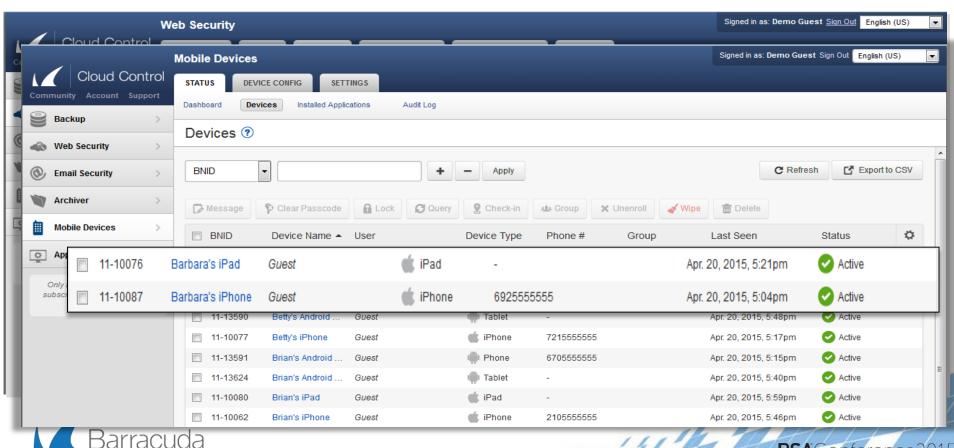

User Dispersion

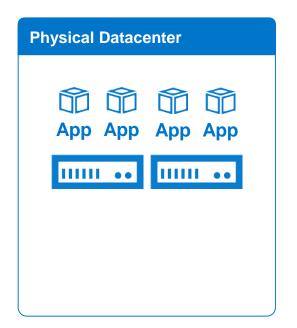

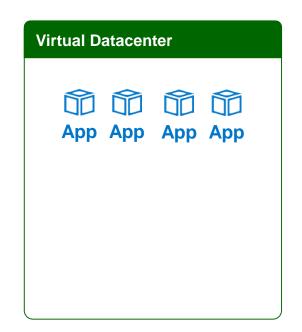

User Dispersion – Centralized Monitoring

- Impact
 - Data Centers span Physical, Virtual and Public Cloud
 - Application traffic flows are non-deterministic
- New requirements
 - Connectivity
 - Secure, bandwidth optimized connectivity across all surfaces
 - Application Security
 - Application security that can migrate with the application
 - Traffic Distribution
 - High throughput traffic distribution across virtual infrastructures

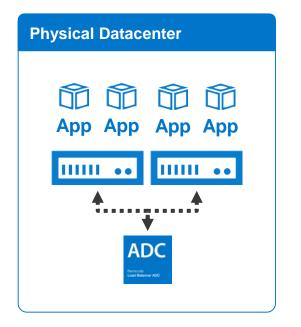

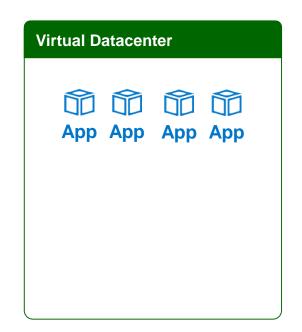

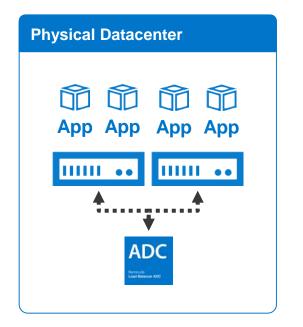

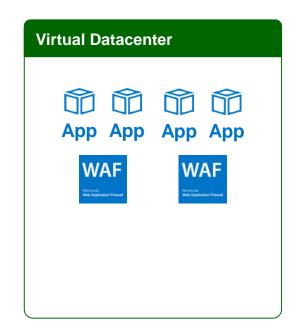

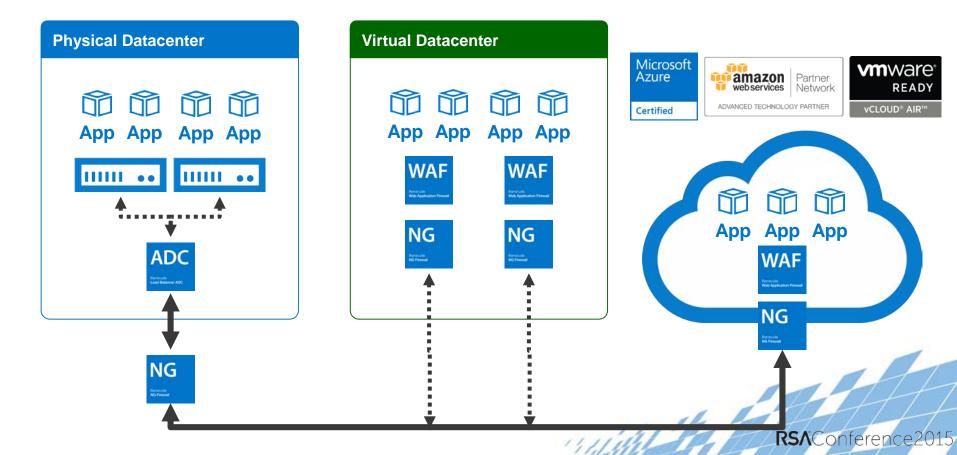

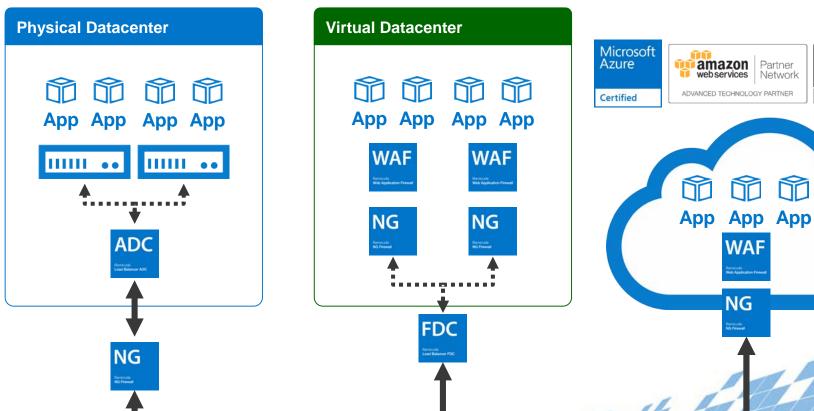

RSAConference2015

Secure Dispersed Networks

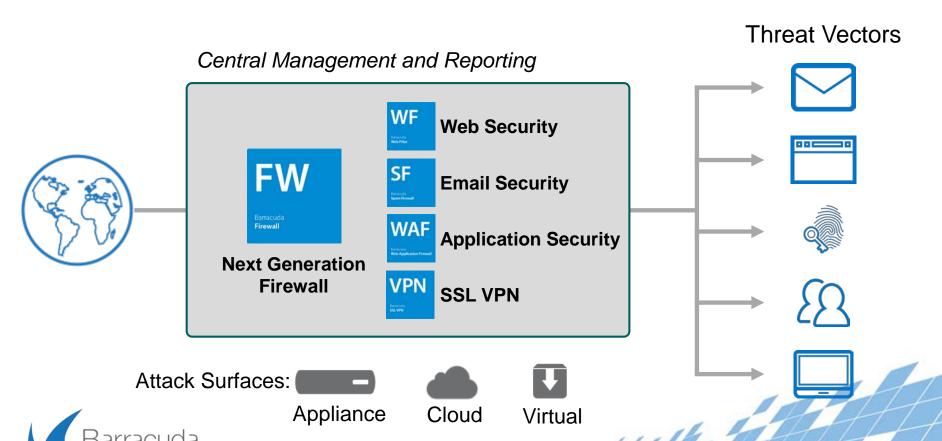

- Secure all network threat vectors
 - Extend to remote locations, users and applications
 - Cover all deployment surfaces Physical, Virtual, Cloud
 - Centrally manage and monitor

Barracuda Total Threat Protection
