Silobreaker for Cyber Threat Intelligence

The OSINT platform providing unparalleled visibility of threats outside your perimeter.

Cyber threats continue to grow in complexity and scale. While most reporting on cyber threat activity is publicly available, few organisations have the tools or personnel to effectively analyse and act on it, leaving critical intelligence on the table.

Silobreaker is trusted by intelligence teams across the globe to make sense of their threat landscape. By automatically analysing and contextualising unstructured data from over a million open, closed, deep and dark web sources, Silobreaker does the heavy lifting, so you can efficiently identify and understand cyber threats in the context of your organisation. Arm your team with real-time contextual intelligence so you can make faster, better informed decisions about the threats that matter most.

How Silobreaker can help you protect your organisation

Track threat actors, malware and attack types

- Detect and research trending cyber threats targeting your industry.

- Harness Silobreaker's powerful analytical tools and visualisations to map the relationship between threat actors and their targets.

- Extract and contextualise hashes, domains and IP addresses from any Silobreaker source, for ingestion into other platforms.

Monitor for leaked credentials

- Leverage customisable alerts to be notified as soon as your organisation's assets, including email addresses, passwords, or company credit cards, appear online.

- Access real-time reporting on attacks and breaches around the world, to help you find and prioritise the actors most likely to cause harm.

- Visualise and compare your customer information exposure against your competitors.

Mitigate third party risk

- Monitor for mentions of third-party vendors and malware infections, breaches as a result of a ransomware attack, and more. Silobreaker allows you to keep a watchful eye on organisations that are relevant to you.

- Extract real-time intelligence on active vulnerabilities, PoCs and exploits relevant to your organisation.

Disseminate intelligence to stakeholders

- Transform data and visualisations within the platform into clean, formatted reports using our report builder.

- Stay informed of emerging threats as soon as they arise, with the help of Silobreaker's customisable alerts. Create alerts on what's most important to you and send them to team members with and without a Silobreaker account.

Silobreaker

Key benefits

Relationship mapping
Silobreaker cuts through noise by contextualising data and bringing meaning to it, enabling you to investigate the connections between threat actors, vulnerabilities, attack types, and malware.

Visualise your threat landscape
Silobreaker's advanced data visualisation capabilities provide a digestible end-to-end view of the threats most relevant to your organisation.

Configurable to your workflow
Easy-to-use collaboration, reporting, and alerting tools ensure a perfect fit for your team's workflow.

Centralised intelligence
Dramatically accelerate your investigations by leveraging Silobreaker as your single point of data aggregation and analysis.
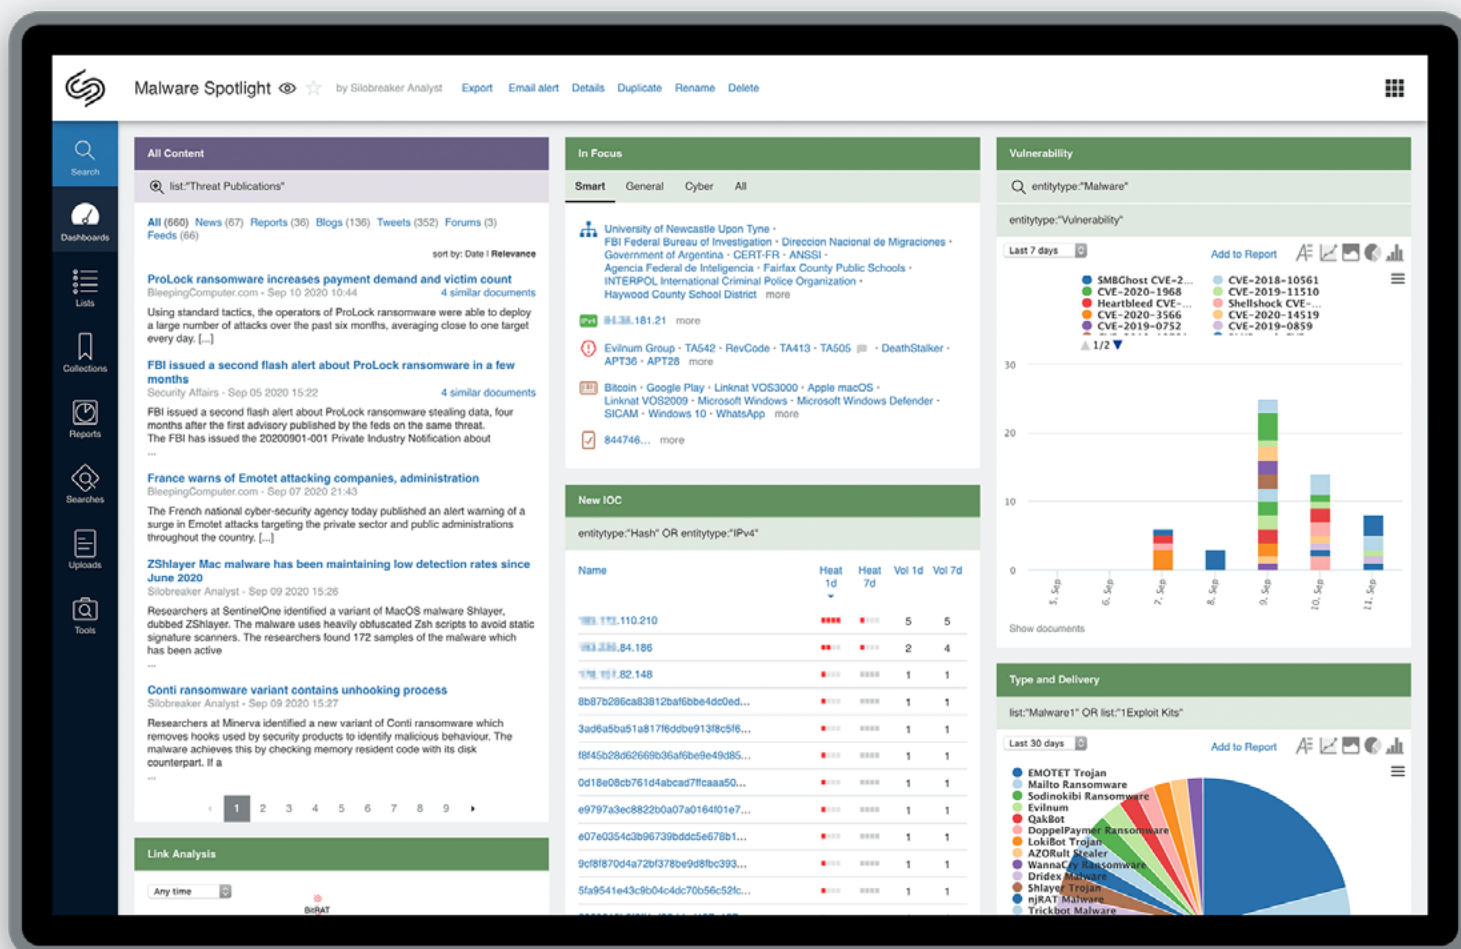

About Silobreaker

Silobreaker helps business, security and intelligence professionals make sense of the overwhelming amount of unstructured data on the web. By providing powerful tools and visualisations that cut through noise and analyse data from hundreds of thousands of open sources, Silobreaker makes it easy for users to monitor and research companies and industries, threats, compromises, actors, instabilities, geopolitical developments or any other topic, incident or event.
