DISCOVER

Discover and identify sensitive, critical, and intellectual data and documents

Discovery of unstructured and dark data across all content within connected systems—enabling classification and reporting

Who? What? Where? How much?

Within today's organizations, both the volume of content and the number of applications deployed to manage that content are rapidly expanding.

These rising siloes are **casting shadows over growing piles of unstructured data**, obscuring sensitivity, security and ownership, and any other potential risks lurking within.
88%

of organizations are no longer confident they can detect and prevent loss of sensitive data

Make better, informed decisions faster

Personally identifiable information [PII], corporate trade secrets or other intellectual property may exist in unstructured data repositories without the knowledge of the organization. Sensitive content may not be properly protected and could represent a cost exposure risk to an organization.

The Dryv platform **discovers and enables the identification of sensitivity level and assesses the risk criticality** of enterprise content. Gain detailed insight into your sensitive content as the platform provides a continuous discovery scan across your enterprise content ecosystem.

Discover sensitive and critical content across various aspects and scenarios.

PII

Enable the continuous identification and classification of PII across files located in any of your connected content repositories.

IT

Enable your IT team to identify sensitive and unprotected key resources unique to technology and protect them within the organization.

M&A

Enable the assessment of unknown content from an acquired organization to properly safeguard content that contains sensitive information.

Divestiture

Enable the assessment of content to identify a subset of documents that are relevant to a specific sub-organization that is being divested.
