TWO-FACTOR AUTHENTICATION FOR ACTIVE DIRECTORY

Secure Logon with YubiKeys and Soft Tokens

AUTHLITE TWO-FACTOR AUTHENTICATION SYSTEM

AuthLite secures your enterprise network authentication and stays in your budget. Unlike all competing multi-factor authentication solutions, the unique AuthLite technology makes your Domain Controllers and connected systems natively process two-factor authentication. With AuthLite, you can keep using all your existing software, with added two-factor authentication security placed exactly where you need it.

FLEXIBLE TWO-FACTOR SUPPORT

YubiKey Tokens: Robust, Affordable, Work Anywhere

✓ Works on any platform supporting USB

✓ One-touch system enters encrypted values automatically– no authentication codes to type

✓ Elegant, simple design with no batteries, screen, or key pad to wear out– virtually indestructible and unlimited life span

Soft Token Support

✓ Use Google or Microsoft Authenticator on your smart phone or tablet as your security token

✓ AuthLite also supports any OATH-compliant time-based hardware token

AuthLite

Intelligent Integration Options

- ✓ Easy installation into your existing Active Directory environment.

- ✓ AuthLite makes no changes to your users or authentication by default. You configure and manage 2-factor authentication for exactly the users, computers, and services you need, and everything else continues to function as-is.

Secure Your Domain Admin Accounts

- ✓ Eliminate the "Pass the Hash" (PtH) attack vector against your administrative accounts by limiting the privileges assigned to a user.

- ✓ Require two-factor logon before granting the Domain Admins group SID.

Remote Desktop Two Factor Authentication

- ✓ AuthLite works with your existing RDP servers and software!

- ✓ No changes needed to client machines' software or drivers.

- ✓ Choose which users and servers require two-factor authentication, leave others as password-only.

LAN and Workstation Security

- ✓ Secure workstations and services on the LAN, support for Windows 7, 8.1, 10, 11, and Server 2008 R2, 2012, 2016, 2019, and 2022.

- ✓ AuthLite supports cached/offline logon for Windows workstations! Even when you are offline, your account logon is still protected with 2-factor authentication.

- ✓ Use two-factor with Linux and macOS logons. (Note: macOS FileVault drive encryption and cached logon still unlock with the user's password.)

VPN and RADIUS Authentication Support

- ✓ Use AuthLite with your current VPN! AuthLite does not require any changes to VPN client software. Your users keep connecting the same way they always have.

- ✓ Set up two-factor authentication for certain users, leave others as password-only.

- ✓ Integrates with Microsoft RADIUS and LDAP for standards-compliant VPN authentication.

> "*AuthLite's* impressive feature set and ease of use combine to make it the value leader of the two-factor authentication market."
